

CLAIMS:

Please enter the following new claims:

1 --10. (newly entered) A computer program product for use with a data processing
2 system having a single graphical pointing device and a display device, said
3 computer program product comprising:

4 a computer usable media including instruction code, said instruction
5 code including:

6 instruction code for causing a data processing system to display
7 a plurality of graphical pointers within said display device;

8 instruction code for causing said data processing system to
9 permit temporary selection of one graphical pointer among said plurality of
10 graphical pointers;

11 instruction code for causing said data processing system to
12 manipulate said one graphical pointer in response to operation of said single
13 graphical pointing device during said selection of said one graphical pointer;
14 and

15 instruction code for causing said data processing system to
16 select a point within said display device in response to closure of a switch
17 associated with said one graphical pointer among said plurality of graphical
18 pointers, said point specified by a position of said one graphical pointer.--

1 --11. (newly entered) The computer program product of Claim 10, wherein said
2 instruction code for causing said data processing system to permit temporary
3 selection of one graphical pointer among said plurality of graphical pointers includes

4 instruction code for causing said data processing system to permit temporary
5 selection of a subset of said plurality of graphical pointers, said subset including
6 said one graphical pointer and at least a second graphical pointer.--

1 --12. (newly entered) The computer program product of Claim 11, wherein said
2 instruction code for causing said data processing system to manipulate said one
3 graphical pointer includes instruction code for causing said data processing system
4 to manipulate said subset of said plurality of graphical pointers.--

1 --13. (newly entered) The computer program product of Claim 12, wherein said
2 instruction code for causing said data processing system to manipulate said subset
3 of said plurality of graphical pointers includes instruction code for causing said data
4 processing system to move said second graphical pointer to a position determined
5 from a position of said first graphical pointer utilizing a selectively defined
6 mathematical function.--

1 --14. (newly entered) The computer program product of Claim 12, wherein said
2 instruction code for causing said data processing system to select a point within
3 said display device includes instruction code for causing said data processing
4 system to select a second point in response to closure of a second switch
5 associated with said second graphical pointer among said subset of said plurality
6 of graphical pointers.--

REMARKS

This Amendment is submitted in response to the Office Action dated September 23, 1996, having a shortened three month statutory period set to expire December 23, 1996.
